REFERENCE LETTER

Working on new project to build a Food Superstore chain in Almonte, Ontario, our client had decided to retrofit existing concrete floors,(approx. 45,000Ft), with a diamond polishing system. Some of the floors required shot blasting and a specialty coating.

After interviewing eastern Ontario flooring contractors, we opted in favor of Concrete Polishing and Sealing Co., Ottawa.

We checked their references/history of completed projects. We visited their office and had a discussion where we were offered many finishing scenarios including a variety of sealing and colouring options. We were invited to their workshop to look at floor grinders, blasting machines and vacuuming systems.

Next, after comparing all tender submissions, we came to the conclusion that the Concrete Polishing product was the most desirable. They installed the Retro-Plate system of Ashford Formula, at a very competitive price.

Project was granted to Concrete Polishing and without regret. The finished product met all expectations. The new polished floors look and perform as promised. The coated floors in food production are withstanding the loads of abuse and our client is pleased.

The project was completed on schedule. Site personnel were knowledgeable, skill-full and worked around client driven schedule changes as required.

Herein, RPM Designers & Builders Ltd. is pleased to provide this letter of reference to Concrete Polishing and Sealing Ltd. without any hesitation.
